

joulie

Log every charge. Understand every kilometre.

Brand Guide

Logo, palette, typography, voice, and exact code-update instructions for the Joulie EV charging tracker by SPS-Lab.

Repository: <https://github.com/SPS-L/joulie>

Maintainer: Sustainable Power Systems Lab · Cyprus University of Technology

Audience: Anyone modifying app icons, colours, logos, or first-impression screens.

1 • Brand strategy

Joulie helps EV drivers understand how their car uses energy. The brand is the visual promise that the answer is precise, private, and free of marketing noise.

Personality

- **Precise.** The product computes kWh, km, gCO₂. The brand looks like an instrument, not a billboard.
- **Energetic but composed.** A single bolt does the talking. Nothing flashes, sparkles, or pulses unprompted.
- **Open and academic.** Built by a lab, GPL-licensed, no telemetry. The SPS-Lab credit is a feature, not a footer.
- **European.** Defaults to km/kWh, EUR, and the Cyprus 2025 grid intensity. The palette leans cool and contemporary.

Voice

- Plain English. Greek users get plain Greek; Turkish users get plain Turkish. No jargon for its own sake.
- Imperative tagline: Log every charge. Understand every kilometre.
- Numbers always have units. kWh, km/kWh, gCO₂/kWh.
- Never use the words scrape, crawl, or marketing fluff like revolutionise. Never use the em-dash.

2 • Logo

The mark is a stylised lowercase j drawn as a lightning bolt. The J anchors the brand name; the bolt encodes the product (energy logging). It sits inside a squircle tile filled with a brand-blue to deep-blue gradient, so it reads identically on the launcher, splash, and any other surface.

Light surface lockup · joulie_logo_light.png

Dark surface lockup · joulie_logo_dark.png

Variants

Always pick the variant that matches the surface luminance. Never invert.

- **Full colour.** Default. Use on photography, brand-blue surfaces, or any neutral surface.
- **Light surface lockup.** Wordmark in #0A1B5E (Ink Deep). Use on white or off-white.
- **Dark surface lockup.** Wordmark in #FFFFFF. Use on Surface Dark or solid brand-blue.
- **Monochrome.** Single-fill SVG. Used by Android 13+ themed icons; the OS tints it to match the user's wallpaper accent.

Clear space & minimum size

- Clear space = the height of the bolt's crossbar on every side.
- Minimum size on screen: 24 dp tall (the launcher and notification icons).
- Minimum size in print: 9 mm tall (do not place the wordmark below this).

Misuse

- Don't recolour the bolt; the gradient is the spark.
- Don't place the full-colour mark on a busy photo without the squircle tile.
- Don't replace the wordmark with a different typeface.
- Don't use the SPS-Lab pill badge as a substitute for the Joulie logo.

3 · Palette

Material 3 seed colours, unchanged from the existing app palette so the rebrand is fully backwards-compatible. Two new tokens are added: **joulie_ink_deep** for wordmark text on light surfaces, and **joulie_spark_green** for the SPS-Lab credit and success accents.

	Token	Hex	Role	Contrast
	Brand Blue	#0D47FF	Primary seed (joulie_brand_blue)	AAA on white
	Deep Blue	#0A2FB0	Gradient anchor; container backdrops	AAA on white
	Teal	#00C2D1	Secondary seed; AC chart series	AA on white
	Spark Green	#A6F43C	Success / accent; SPS-Lab credit	Use on dark only
	Energy Yellow	#FFD54D	Tertiary seed; DC chart series	Use on dark only
	Ink Deep	#0A1B5E	Wordmark on light surfaces	AAA on white
	On Surface	#1A1C1E	Default body text	AAA on white
	Surface Light	#FDFCFE	Light theme background	n/a
	Surface Dark	#1A1C1E	Dark theme background	n/a

4 · Typography

Joulie ships with the Android system stack. The Material 3 type scale (textAppearanceHeadlineSmall, titleMedium, bodyMedium, etc.) is the single source of truth in-app. The wordmark in the rendered logo PNGs uses Noto Sans Display Black for visual punch. Never re-set the wordmark in another font.

In-app type roles

Role	M3 attribute	Spec	Where
Hero / page title	textAppearanceHeadlineSmall	24 sp · 400 wt	Dashboard title, About header, Wizard subtitle
Section title	textAppearanceTitleMedium	16 sp · 500 wt · primary tint	Card section headers
Body	textAppearanceBodyMedium	14 sp · 400 wt · onSurface	Paragraphs, list rows
Label	textAppearanceLabelMedium	12 sp · 500 wt · primary	Field labels, chip text
Caption / footer	textAppearanceBodySmall	12 sp · 400 wt · onSurfaceVariant	Timestamps, hints

5 • App icon

Three layers, each rendered at the five Android densities (mdpi, hdpi, xhdpi, xxhdpi, xxxhdpi):

- **Background.** Solid @color/joulie_brand_blue tile (already in colors.xml).
- **Foreground.** Gradient bolt-J PNG with a subtle drop shadow and crossbar highlight.
- **Monochrome.** Single-fill vector for Android 13+ themed icons. NEW.

Above: 512×512 Play Store icon · ic_launcher_512.png

Notification stat icon

Pure-white bolt on transparent, rendered at 24 dp for each density and dropped into `res/drawable-*dpi/ic_stat_joulie.png`. The Android system tints it to match the notification surface; never bake colour into this asset.

6 · Hero artwork & screen redesigns

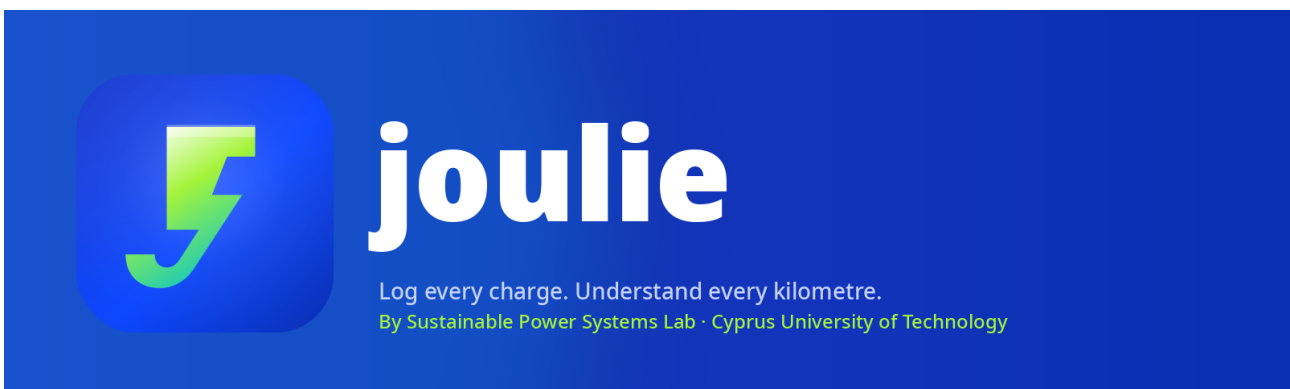

The wizard welcome page and the About screen are the two screens that decide whether Joulie feels like a hobby project or a real product. Both now lead with a branded hero panel.

Wizard welcome (page 1)

Top 52% of the page is the gradient hero (mark + wordmark + tagline, baked into a single PNG so it scales crisply at any density). The lower 48% is a white surface card with rounded top corners that tucks behind the hero, giving the welcome screen a depth and rhythm that the previous all-text version lacked.

About screen

240-dp CollapsingToolbarLayout with the gradient banner as the parallax background. As the user scrolls, the title collapses into the toolbar over the brand-blue scrim. The cards below now use the M3 filled card style with a 20-dp corner radius and zero elevation, replacing the harder 16-dp outlined cards.

7 • Asset inventory

Everything below is delivered as static files in the **code_dropins/** folder, structured to mirror the repo's `app/src/main/` tree. Copy each file to the matching path in the repo (no rename needed).

Path in repo	Format	Description
<code>res/mipmap-*/ic_launcher.png</code>	PNG (5 densities)	Pre-Android-O launcher (square).
<code>res/mipmap-*/ic_launcher_round.png</code>	PNG (5 densities)	Pre-Android-O launcher (round).
<code>res/mipmap-*/ic_launcher_foreground.png</code>	PNG (5 densities)	Adaptive-icon foreground (gradient bolt).
<code>res/mipmap-anydpi-v26/ic_launcher.xml</code>	XML	Adaptive icon. Adds <monochrome> layer.
<code>res/mipmap-anydpi-v26/ic_launcher_round.xml</code>	XML	Round adaptive icon. Adds <monochrome> layer.
<code>res/drawable/ic_launcher_monochrome.xml</code>	Vector	Themed-icon source for Android 13+.
<code>res/drawable/ic_splash_bolt.xml</code>	Vector	Splash-screen bolt icon.
<code>res/drawable/bg_brand_gradient.xml</code>	Vector	135° brand-blue gradient (fallback hero bg).
<code>res/drawable/about_hero.png</code>	PNG	About-screen hero banner (light).
<code>res/drawable-night/about_hero.png</code>	PNG	About-screen hero banner (dark).
<code>res/drawable/wizard_hero.png</code>	PNG	Wizard welcome hero (light).
<code>res/drawable-night/wizard_hero.png</code>	PNG	Wizard welcome hero (dark).
<code>res/drawable/ic_spslab_badge.xml</code>	Vector	SPS-Lab pill badge. Bolt recoloured to FFD54D.
<code>res/drawable-*dpi/ic_stat_joulie.png</code>	PNG (5 densities)	Notification status-bar icon (replaces existing).
<code>res/layout/fragment_about.xml</code>	Layout	Redesigned About screen with collapsing hero.
<code>res/layout/fragment_wizard_page1.xml</code>	Layout	Redesigned wizard welcome page.
<code>res/values/colors_added.xml</code>	Patch	Two new tokens. Merge into colors.xml.
<code>res/values/strings_added.xml</code>	Patch	wizard_page1_intro_title. Merge into strings.xml.
<code>res/values/themes_splash_patch.xml</code>	Patch	Splash style. Replace in themes.xml.
<code>docs/branding/joulie_logo_light.png</code>	PNG	README hero (light).
<code>docs/branding/joulie_logo_dark.png</code>	PNG	README hero (dark).
<code>docs/branding/play-store/ic_launcher_512.png</code>	PNG	Play Store listing icon.
<code>docs/branding/play-store/feature_graphic.png</code>	PNG	Play Store feature graphic (light).
<code>docs/branding/play-store/feature_graphic_dark.png</code>	PNG	Play Store feature graphic (dark).

8 · Step-by-step update instructions

Apply these in order. Each step is independent and reversible (git revert).

Step 1 · drop in the new assets

From the brand pack root, copy **code_dropins/res/** over **app/src/main/res/**. Existing files of the same name are intentionally overwritten; that is the rebrand.

```
rsync -av code_dropins/res/ app/src/main/res/
# Or, if you prefer cp:
cp -r code_dropins/res/* app/src/main/res/
```

Step 2 · merge the colour patch

Open `app/src/main/res/values/colors.xml` and append the two new tokens from `colors_added.xml` right above the closing `</resources>` tag:

```
<color name="joulie_ink_deep">#0A1B5E</color>
<color name="joulie_spark_green">#A6F43C</color>
```

Step 3 · merge the string patch

Add to `res/values/strings.xml` and translate into the three localised string files:

```
<string name="wizard_page1_intro_title">Welcome to Joulie</string>
```

Suggested translations:

```
values-el/strings.xml → Καλώς ήρθες στο Joulie
values-tr/strings.xml → Joulie'ye hoş geldin
values-ru/strings.xml → Добро пожаловать в Joulie
```

Step 4 · replace the splash style

In `res/values/themes.xml`, replace the existing **Theme.EVTracker.SplashScreen** style with the contents of `themes_splash_patch.xml`. The new style points to `@drawable/ic_splash_bolt` on the brand-blue background.

Step 5 · opt into the splash icon background

If you want the splash to use the brand-blue tile (recommended, matches the launcher), keep `windowSplashScreenBackground=@color/joulie_brand_blue`. If you prefer the splash to flip with the system theme, change it to `?android:colorBackground` (white in light mode, near-black in dark).

Step 6 · verify the layouts compile

Both replaced layouts use only existing IDs and existing string IDs (plus the one new string from step 3). The matching ViewModels and Fragments need no Kotlin changes; verified against the current `AboutFragment.kt` and `WizardPage1Fragment.kt`.

```
./gradlew :app:assembleDebug
```

Step 7 · Play Store listing

- Replace the listing icon with `play-store/ic_launcher_512.png`.
- Replace the feature graphic with `play-store/feature_graphic.png` (or `_dark` for the dark variant).
- Refresh the listing screenshots once the new About + Wizard surfaces are live; the existing screenshots will look out-of-brand against the new icon.

Step 8 · README

Replace the README hero block with the dual-source picture so it auto-switches in GitHub light vs. dark mode:

```
<p align="center">
  <picture>
    <source media="(prefers-color-scheme: dark)"
      srcset="docs/branding/joulie_logo_dark.png">
    
  </picture>
</p>
```

9 • Light vs. dark • the rules

The full-colour mark sits on its own gradient tile, so it works identically in both modes. Everything else has an explicit light / dark variant.

Surface	Light mode asset	Dark mode asset
Launcher icon	ic_launcher (brand-blue tile)	Same. OS owns the surface.
Themed icon (Android 13+)	ic_launcher_monochrome (tinted by OS)	Same. OS owns the surface.
Splash	Brand-blue tile + white bolt	Same. Matches launcher.
About hero	drawable/about_hero.png	drawable-night/about_hero.png
Wizard hero	drawable/wizard_hero.png	drawable-night/wizard_hero.png
README / GitHub	joulie_logo_light.png	joulie_logo_dark.png (auto via <picture>)
Wordmark colour	#0A1B5E (Ink Deep)	#FFFFFF
Tagline colour	#43474E (onSurfaceVariant)	#C3C7CF (onSurfaceVariant, dark)
Notification icon	ic_stat_joulie.png · single asset, OS tints it	Same

10 • Acceptance checklist

- Launcher icon shows the bolt on brand blue at every density (check Settings > Apps > Joulie).
- Long-press the icon, enable Themed icons, the bolt is tinted by the wallpaper accent (Android 13+).
- First launch shows brand-blue splash with the white bolt, then the wizard welcome with the gradient hero.
- About screen header collapses smoothly; SPS-Lab credit visible inside the gradient banner.
- Toggle system theme to dark. Both heroes and the wordmark switch correctly.
- Notification (trigger a Drive backup failure) shows the white bolt status-bar icon.
- Play Store listing preview uses the new 512 icon and feature graphic; no orange remnants from the legacy SPS-Lab badge.
